1 General Information

1.1 General Description

The equipment under test (EUT) is a transmitter for Looj Robot. It operates at 49.860MHz and the oscillation of radio control is generated by a crystal. The EUT is powered by 1 x 7.2V rechargeable battery. When it switched on and received radio control signal, it runs forward and backward.

The brief circuit description is listed as follows:

- Q1, Q2, U2 and associated circuit act as receiver.
- U1 and associated circuit act as decoder.
- U4 and associated circuit act as voltage controller.
- Q1, Q2, Q13 ~ Q15, Q7, Q8 and associated circuit act as motor controller.

2 Description of the radiated emission test

2.1 Test Procedure

Radiated emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 – 2003.

The equipment under test (EUT) was placed on a non-conductive turntable with dimensions of 1.5m x 1m and 0.8m high above the ground. 3m from the EUT, a broadband antenna mounting on the mast received the signal strength. The turntable was rotated to maximize the emission level. The antenna was then moving along the mast from 1m up to 4m until no more higher value was found. Both horizontal and vertical polarization of the antenna were placed and investigated.

For below 30MHz, a loop antenna with its vertical plane is placed 3m from the EUT and rotated about its vertical axis for maximum response at each azimuth about the EUT. And the centre of the loop shall be 1 m above the ground.

A signal generator was used to radiate an unmodulated continuous wave (CW) signal to the EUT (super-regenerative receiver) at its operating frequency in order to “cohere” the characteristic broadband emissions from the receiver.

2.2 Test Result

The frequency from 30MHz to 1000MHz were investigated, and emissions more 20dB below limit were not reported.

The emissions meeting the requirement of section 15.109 are based on measurements employing the CISPR quasi-peak detector below 1000MHz and average detector for frequencies above 1000MHz.

It was found that the EUT meet the FCC requirement.

3 Description of the Line-conducted Test

3.1 Test Procedure

Conducted emissions measurements are investigated and also taken pursuant to the procedures of ANSI C63.4 – 2003. The EUT was setup as described in the procedures, and both lines were measured.

3.2 Test Result

No measurement is required as the EUT is a battery-operated product.
